Lee- I return from vacation today. The County has those plans already as part of the new house permit. The feature being permitted is the rock wall. Let me know if you cannot access the civil site plans for the house, road and drainage.

Hi

A while ago I asked for a site plan which shows all the development on the property. You submitted a plan which shows the new house, but none of the grading, roadwork or drainage improvements are shown. It is important to show those items because uphill runoff is mentioned in the geo tech report. Once I receive that info I can begin to process the application.

Thanks  
Lee
