Hello. I have nothing against cannabis per se. However, I do think any and all industries that require extensive well water usage should to be looked at as the Islands have limited well water available to them. I think a review generally speaking about industry and its water usage would be prudent - whether that be with regards to cannabis, hotels or large farms, etc. Perhaps with new industries, such as this cannabis farm, which would be in production for sales elsewhere rather than being for example, a food source for Islanders, there needs to be more of a review and even a disallowance of such if a long term view to water as our most important resource is our focus. At a minimum it would be important to require an additional water catchment system, strong education and accountability about water usage and neighbors' approval because of water issues.

Thank you.

Dear Council,

As a full time county resident and business owner, I would like to see a very careful and inclusive process regarding the permitted production of marijuana in our county. There are several environmental concerns pertaining to water use, energy consumption, light pollution, excessive odors and many more I'm sure, that should be discussed in an open community forum. Transparency and inclusion should guide this decision making.

I request that the council extend the moratorium on permitting until a full third party community / environmental impact study has been produced.

I support the new marijuana laws wholeheartedly, however, there may be no turning back from a decision to allow this crop in our little island group.

Thank you for all your good work on the council.
